

Leveraging RESET® for Healthy and Sustainable Buildings

Actionable, Data-driven Insights

Incorporating RESET into the **Switch Building Intelligence Platform** offers real-time insights for maintenance, service, and efficiency opportunities across all operations. Empowered by data, building owners and managers can make informed decisions, navigate potential problems and mitigate risks.

You cannot effectively solve what you cannot measure.

By monitoring indoor air quality with real-time data, building operators may detect anomalies and potential airborne contaminants and other pollutants that threaten the well-being of occupants.

Property owners, operators, and tenants can use the IAQ data to optimize their buildings and minimize the infection potential of airborne pathogens.

Using the data from continuous monitoring, visibility on IAQ calculates the potential for infection based on the indoor air quality metrics of a building, or indoor spaces air system.

The RESET® Standard

Trusted, Actionable and Relevant Data

RESET is the world's first sensor-based and performance-driven data standard and certification program for the built environment.

Standardized Data Collection and Continuous Monitoring

Unlike a design standard for measuring, certifying, and monitoring features, RESET is a data standard that focuses on collecting data via long-term, real-time monitoring.

Indoor Air Quality (IAQ) Index

| RESET® Air Index

An index for communicating indoor environment quality based on concentrations of multiple types of pollutants, including PM2.5, CO₂ and TVOC.

| RESET® Viral Index

Building optimization index that reflects the optimal indoor air quality environment to limit airborne viral transmissions and expresses it in one number.

RESET® Air Index measures:

- | PM2.5: Particulate Matter
- | CO₂: Carbon Dioxide
- | Temp: Temperature
- | TVOC: Chemical off-gassing
- | RH: Humidity

How the Switch Building Intelligence Platform enables RESET®

Promoting Health and Productivity

Increase occupants' trust with full transparency into building data and performance—vital to attracting and retaining quality tenants.

Optimize for Solutions

Knowing you have a problem is the first step to solving it. Start collecting data and monitoring performance today to drive action and optimization in the future.

Tenant Engagement and Added Services

Enable data sharing between building owners and tenants.

Future-Proofing via Change Management

The future is data. A data standard helps train internal teams to utilize data to predict and prepare.

Monitor and continuously optimize building performance to develop actionable, long-term strategies toward health and sustainability

Switch Automation enables intelligent, actionable insights about your building to improve operational efficiencies, enhance occupant comfort, and reduce costs.

Certified as a **RESET® Accredited Data Provider**, Switch is a trusted data-driven software platform for intuitive data collection, real-time and continuous monitoring, action-oriented system efficiency, and high-performing building management and technology.

About Switch

Switch Automation is a global real estate software company that helps property owners and facility managers reduce operating costs, improve energy efficiency and deliver exceptional occupant satisfaction. Our comprehensive smart building platform integrates with traditional building systems as well as Internet of Things (IoT) technologies to analyze, automate and control assets in real-time. We serve enterprise customers and partners in a variety of industries including financial services, retail, grocery, commercial real estate and more. Learn how Switch Automation creates technology to bring people and planet to the center of building operations at www.switchautomation.com
